ROCKY MOUNTAIN HARDWARE REFRESHES LIGHTING COLLECTION WITH LEDS, UL-WET RATINGS

Hailey, ID – Rocky Mountain Hardware (RMH), a leading manufacturer of bronze hardware, announced updates to their acclaimed architectural Lighting Collection.

Previously available in incandescent lamp configurations, all RMH light fixtures are now available in either incandescent or LED lamp types. Already an ecologically conscious collection, the new LED option adds a host of benefits for the consumer, including:

- No lead, no mercury
- Low voltage
- 50,000 hours of lamp life
- Instant on/off performance
- Energy savings of as much as 80%
- Meets California's Title 24 lighting requirements

Combining RMH's trademark art-grade bronze with hand-blown and hand-cast glass, the Lighting Collection is a truly transitional collection, gracefully spanning styles from traditional to contemporary. Interesting forms of slump molded glass, as well as smooth, arced, and geometric designs comprise the collection.

The four different fixture categories in the collection — sconces, pendants, vanities, and chandeliers — are composed of twenty-five different designs, four of which are brand new for 2009: the Lantern Sconce (WS465); the Vessel Sconce (WS425); the Small Tunnel Sconce (WS480); and the Delta Pendant (PE430).

In addition, there are four escutcheon choices — rectangular, square, oval, and circular — and four glass choices — square, round, flat, and corrugated. The entire Lighting Collection is available in nine different patina finishes to blend seamlessly with all RMH products, and all are UL-rated for damp location. In addition, seven items are also UL rated wet.

As with all RMH products, the Lighting Collection boasts a composition rate of 90% recycled material — 50% of which is post-consumer — as certified by Scientific Certification Systems (SCS), a leader in independent auditing, certification and standards development for environmental and sustainability claims. As a result, the use of RMH lighting products can contribute towards accruing United States Green Building Council LEED® certification credits for a registered project.

RMH also offers custom lighting design. The company's design team will work with the client to realize his or her own signature piece, whether the concept is merely a vague notion or a fully formed design. And, as the custom design process is not limited to lighting, the design team will work with clients on the firm's full range of hardware, ensuring a seamless design fit throughout the space.
