LEVEL AND ROCKY MOUNTAIN HARDWARE PARTNER TO INTEGRATE SMART LOCKS IN EXISTING COLLECTIONS

The invisible smart lock preserves Rocky Mountain Hardware's 'old-world' aesthetics.

Rocky Mountain Hardware

Level Home has partnered with manufacturer Rocky Mountain Hardware to integrate its Level Bolt invisible smart lock into select [Rocky Mountain Hardware](#) collections, including Edge, Metro, Mack, and Ellis, among others.

The “invisible” nature of the Level Bolt, which installs inside the door, allows customers to reap the benefits of a smart lock while keeping their home’s style consistent with Rocky Mountain Hardware’s old-world aesthetics.

“We’ve long believed that true smart home products should thoughtfully balance design and technology, without any compromises,” says John Martin, CEO and co-founder of Level. “Our invisible smart lock technology allows homeowners to maintain the aesthetic of their homes. We’re thrilled to unveil our new collection with Rocky Mountain Hardware and offer even more ways for users to customize their homes with premium hardware and advanced technology.”

The Level Bolt uses a patent-pending, six-stage stainless steel gearbox designed to withstand tough conditions, and operates on a single CR2 battery for a full year. The bolt is compatible with iOS, Android, and Amazon, as well as Ring and Apple HomeKit, and friends and family can use either their phone or standard keys to operate the lock.

“Level is the partner we found whose technology integrates seamlessly within our hardware and really allows the product to shine,” says Christian Nickum, Rocky Mountain Hardware’s president. “We are thrilled to further expand our smart lock offerings with this invisible deadbolt lock that not only complements our hardware but also creates a functional entry system for everyday use.”

The Level Bolt integration marks Level’s second integration with an architectural hardware company, following its work with [OMNIA Industries](#) in 2020.
