GT = Grout Through Tile

* Custom Lengths Available

Installation Recommendations

Always use a professional tile installer when setting Rocky Mountain Hardware bronze tile.

Preparation—Masking the surface of bronze tiles before installation will help keep them clean throughout the setting process.

Rough up the back of tiles to increase adhesive bond.

To match the surface height of surrounding tile, use properly gauged tile backerboard to shim the bronze tiles to the desired height.

Adhesives—Rocky Mountain Hardware tile can be installed using a high quality polymer-fortified thin-set adhesive such as Laticrete 254 Platinum.

Epoxy based adhesives may be used for setting larger, heavier bronze tiles and panels.

Some Rocky Mountain Hardware tiles have significantly recessed backs and should be filled with setting material when installing to ensure the best bond possible.

Grout—Sanded or unsanded grouts may be used. We recommend masking the surface of the tile before starting the grout process. Take time to remove all unwanted grout and grout-film from the tile surface before the grout fully cures. Once the grout hardens, it is difficult to remove without damaging the finish of the tile.

Cutting—Bronze tiles may be cut on site using a grinder equipped with a thin cut-off blade or by using a metal cutting band saw. Important: avoid over-heating the bronze tile when making cuts. Overheating may cause the surface of the tile to become discolored.

Tips for “Grout-Through” (GT) Tile Installation

Sanded grout can scratch the surface of bronze tiles, possibly removing the patina, if great care is not taken when grouting. Masking the tile surface prior to grouting will help keep grout out of crevices as well as protect from scratches. Use clean water and a clean sponge when cleaning grout lines.

When cleaning grout lines within a “Grout-Through” tile, it is vital to the tiles intended appearance for the grout in the tile to be minimal. The more a “Grout-Through” line is taken down, the more the bronze design stands out.

Floor Installations

When using bronze tile in a floor application, we strongly recommend only using the following patina options; Silicon Bronze Light (BL), Silicon Bronze Brushed (BBB), White Bronze Light (WL), or White Bronze Brushed (WBB). All other patina finishes will wear in traffic areas, eventually exposing the natural color of the base metal.
